

## Title

How old am I?

## Problem Description

Write a function called `my_age` with the following header:

```
int my_age(int birthYear, int currentYear)
```

The function should compute the number of years between `currentYear` and `birthYear`, and return the value. Use the following `main()` in your program:

```
int main()
{
    int yr1 = 0, yr2 = 0, age = 0;

    cin >> a >> b;

    age = my_age(yr1, yr2);
    cout << age << endl;

    return 0;
}
```

## Testing

Test Input	Expected Output
1986 2015	29
2015 2015	0
1999 2000	1

## Time Target

- \*\*\* less than 2 minutes
- \*\* 2 – 5 minutes
- \* greater than 5 minutes

## Section
